

# Node Information

## Service

NODE\_INFO ([javadoc.org/arl/unet/Services.html#NODE\\_INFO](http://javadoc.org/arl/unet/Services.html#NODE_INFO)) – Node information service

Agents offering the *Node Information* service manage and maintain a node's attributes such as address, location, speed etc. They support a set of parameters that are explained below.

## Implementations

- NodeInfo ([javadoc.org/arl/unet/nodeinfo/NodeInfo.html](http://javadoc.org/arl/unet/nodeinfo/NodeInfo.html)) – provides a repository for node information

## Requests and Responses

Request	Possible Responses	Description
ParameterReq ( <a href="http://javadoc.org/arl/unet/ParameterReq.html">javadoc.org/arl/unet/ParameterReq.html</a> )	ParameterRsp ( <a href="http://javadoc.org/arl/unet/ParameterRsp.html">javadoc.org/arl/unet/ParameterRsp.html</a> )	Get/set/list parameters

## Parameters

Parameter	r/w	Description
address ( <a href="http://javadoc.org/arl/unet/nodeinfo/NodeInfoParam.html#address">javadoc.org/arl/unet/nodeinfo/NodeInfoParam.html#address</a> )	rw	Node address (1 byte)
nodeName ( <a href="http://javadoc.org/arl/unet/nodeinfo/NodeInfoParam.html#nodeName">javadoc.org/arl/unet/nodeinfo/NodeInfoParam.html#nodeName</a> )	rw	Node name
location ( <a href="http://javadoc.org/arl/unet/nodeinfo/NodeInfoParam.html#location">javadoc.org/arl/unet/nodeinfo/NodeInfoParam.html#location</a> )	rw	Node location ([x, y, z] meters)
speed ( <a href="http://javadoc.org/arl/unet/nodeinfo/NodeInfoParam.html#speed">javadoc.org/arl/unet/nodeinfo/NodeInfoParam.html#speed</a> )	rw	Node speed (meters/second)
heading ( <a href="http://javadoc.org/arl/unet/nodeinfo/NodeInfoParam.html#heading">javadoc.org/arl/unet/nodeinfo/NodeInfoParam.html#heading</a> )	rw	Node heading (degrees, 0 is North, clockwise)
turnRate ( <a href="http://javadoc.org/arl/unet/nodeinfo/NodeInfoParam.html#turnRate">javadoc.org/arl/unet/nodeinfo/NodeInfoParam.html#turnRate</a> )	rw	Node turn rate (degrees/second, positive clockwise)
diveRate ( <a href="http://javadoc.org/arl/unet/nodeinfo/NodeInfoParam.html#diveRate">javadoc.org/arl/unet/nodeinfo/NodeInfoParam.html#diveRate</a> )	rw	Node dive rate (meters/second)
mobility ( <a href="http://javadoc.org/arl/unet/nodeinfo/NodeInfoParam.html#mobility">javadoc.org/arl/unet/nodeinfo/NodeInfoParam.html#mobility</a> )	rw	true if the node is mobile, false if it is static

## Notifications ¶

Notification	Topic	Description
ParamChangeNtf ( <a href="http://javadoc.org/arl/unet/ParamChangeNtf.html">javadoc.org/arl/unet/ParamChangeNtf.html</a> )	default	Notification about the modified address ( <a href="http://javadoc.org/arl/unet/nodeinfo/NodeInfoParam.html#address">javadoc.org/arl/unet/nodeinfo/NodeInfoParam.html#address</a> )
ParamChangeNtf ( <a href="http://javadoc.org/arl/unet/ParamChangeNtf.html">javadoc.org/arl/unet/ParamChangeNtf.html</a> )	PARAMCHANGE ( <a href="http://javadoc.org/arl/unet/Topics.html#PARAMCHANGE">javadoc.org/arl/unet/Topics.html#PARAMCHANGE</a> )	Notification about the modified parameter

### Todo

Network time synchronization related functionality of this service is yet to be fully defined.
